

Presentation Project

Lesson plan

Created by the Delightex team

Education level: From kindergarten

Subject: STEAM, social sciences, foreign languages, ELA

Format: Individual activity

Duration: Approx. 30 minutes

Introduction and lesson objectives:

This lesson plan is ideal to get started with Delightex Edu and works well as an introductory exercise for a first class. The task is to introduce yourself through a personal virtual Project representing who you are.

It can be a good idea for the teacher to start the school year and present this activity with a “Meet the teacher” presentation Project in which you can introduce yourself to your students and show them an example of what they’ll have to create.

Learning goals and student benefits:

- Encourage creativity
- Develop self-knowledge
- Develop design skills
- Develop communication skills
- Help engage with classmates

Activity example:

1. Introduce yourself and explain the activity with your “Meet the teacher” Project.
2. Optionally, introduce Delightex Edu by showing the creation process you used.
3. Ask each of your students to create a Project of their own introducing who they are and visually representing each of them. Make them feel free to get creative!
4. Let students personalize their Project and explore Delightex Edu further by using various 3D creation tools, adding decorations to their Projects, and maybe even using some animations to make their Project more dynamic.
5. Optionally, ask your students to introduce themselves to the class, using their virtual Project as a presentation support.

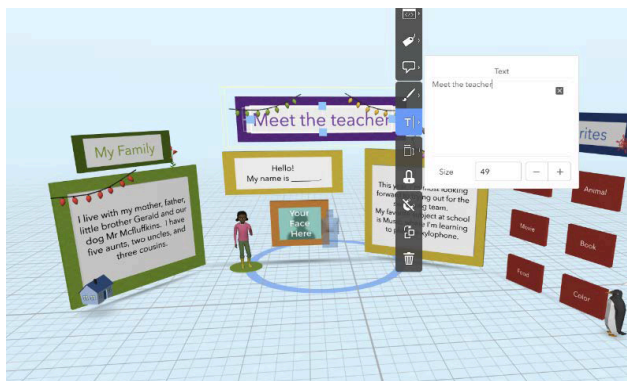

Extension idea:

Ask your students to each build a personal quiz based on the information they’ve added to their presentation Project. They can then have fun asking their classmates to take their quiz.

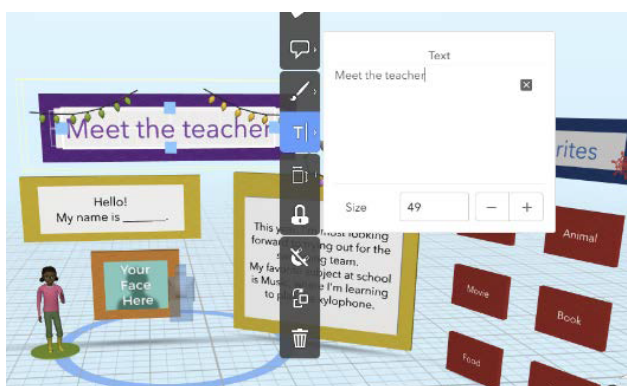

Assessment and evaluation suggestions:

- Have your students designed an original presentation Project that introduces who they are and represents themselves?
- Did your students put effort into designing their presentation Project?
- Have your students managed to effectively communicate their ideas (visually and orally, if they presented to the class)?

Creation guide

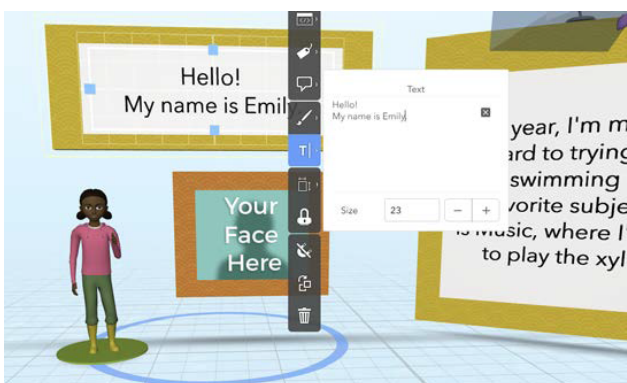

To get started, lay out the scene for your presentation Project or use the ["All about me" presentation template](#) and [Remix](#) it to get your own copy.

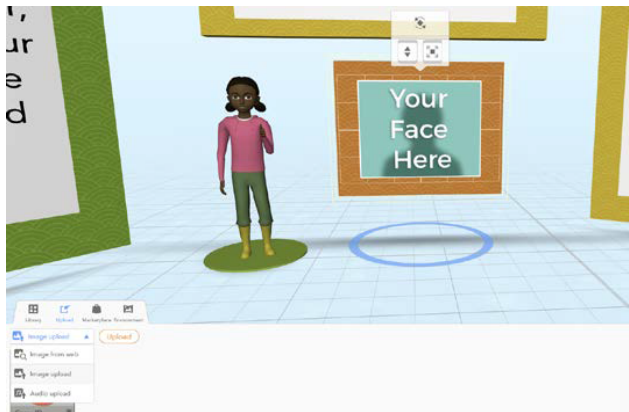

Start by choosing the ideal title for your presentation Project.

You can edit the title text by double clicking on the banner.

Add your name to the preset text field to start turning the scene into your own virtual presentation Project!

Add your portrait to the preset frame. To do this, go to the **Upload** tab and import your headshot from your computer.

You will then be able to simply drag and drop your picture into your scene.

Double or right- click the image and click **Attach** to place the image inside the frame.

Once you're done with these basics, fill in all other frames and personalize your Project as much as you want!
